Exit and return

The ISO3 – SHORE LINER - is based on the Nordic-Seahunter hull – with many years of experiences from the roughest arctic conditions.

2 or more boats can easily be connected in length or side by side.

The “tractor” is powered by a 25 Hp High Trust outboard which allows swift transportation and unique maneuverability in shore line operations.

The “trailer” is equipped with proper tools and IPC-containers to manage different tasks during the roughest operations.

We are presenting Sala Roll pump which has outstanding capabilities when it comes to suction operations of oil spill of all viscosities.

The “tractor” is also equipped with lenses (up to 100 metres) and light oil pumps and tank capacity. The boats are designed for heavy loads and quick shift of on board equipment.

The boats are rotation moulded polyethylene catamarans. The material is perfect for rough operations even in temperatures varying from – 50 to + 50 degrees Celsius.

Our boats are currently operating in areas from the arctic north to the Dead Sea in Jordan.

...Other boats just dream of having these capabilities...

Container sized

6x2 Meters

Max load 2.500 kg

The “Tractor” is released and operates lenses and light oil skimming.

The “Trailer” is left on the beach and performs suction operations of heavy viscosity oil spill on shore.

Sala Roll pump is probably the world's most effective pump in this kind of operations.

The boats are equipped with LED-flow lights allowing 24H operations.

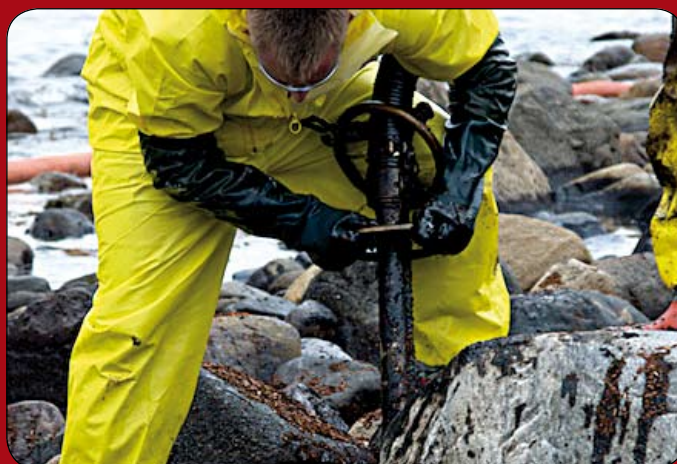

After successfully operations the boats are easily hooked up and ready to return to depot or mother ship for emptying of on board tanks or reconfiguration of equipment.

ISO3 – SHORE LINER is a revolution regarding on shore oil spill operations – all kind of equipment are able to fit in.

You will be able to perform swift and safer than ever done before.

...it's a dirty job, and you have to do it.....
