

NorMar Soft Shovel Brush Skimmer Cassette

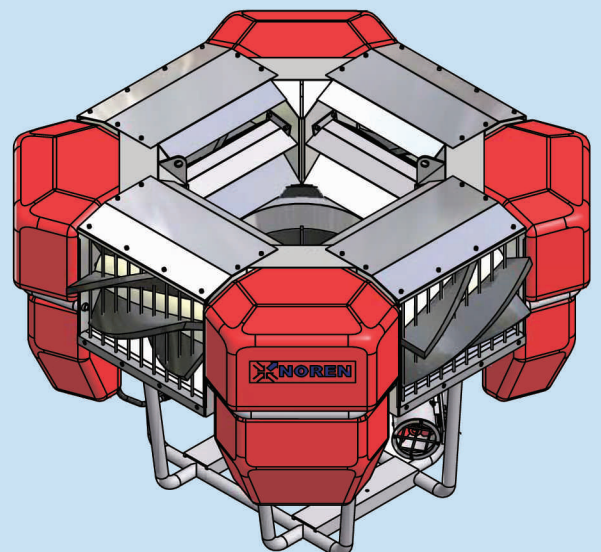

Oil Spill *Response* *Equipment*

The NorMar Soft Shovel Brush Skimmer Cassette is designed to fit directly on to the NorMar weir skimmer frame, and thereby providing the user with a skimmer head system that can handle all types of oil, from light to heavy oil.

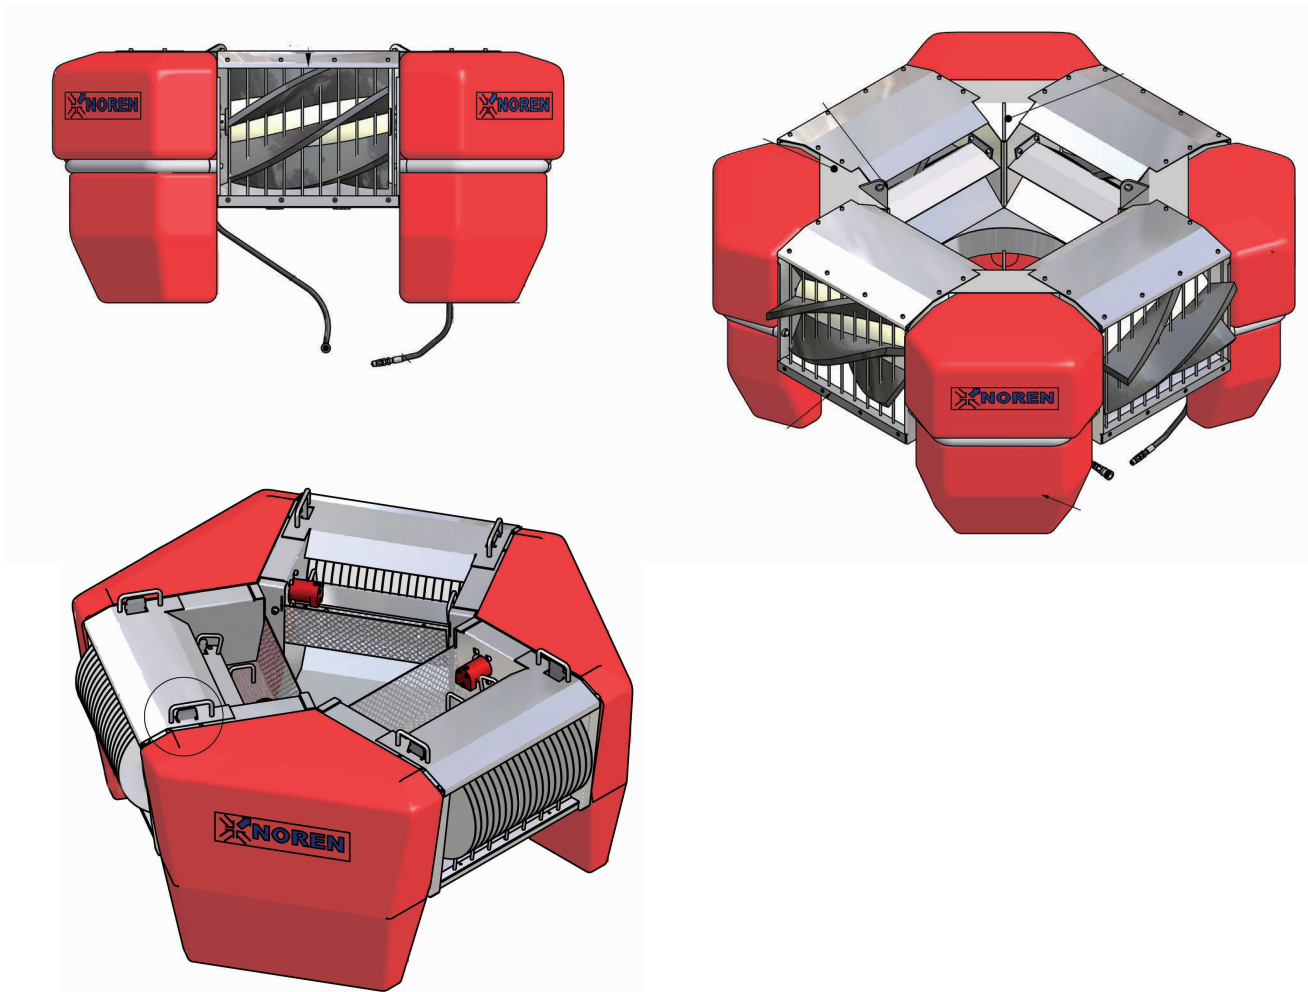

The cassette has its own floating chambers made from foam filled PE material. The body is made from seawater resistant aluminium. The soft shovel brushes can very easily be replaced by adhesive discs for skimming in very thin layers of oil.

The system has proven its capability during The “Rocknes” incident outside Bergen, recovering heavy fuel oil of more than 250.000 cSt viscosity in winter conditions.

The NorMar Soft Shovel cassette is delivered in two sizes:
The NorMar 50 cassette with 3 sets soft shovel brush units
The NorMar 200 cassette with 4 sets soft shovel brush units.

NorMar Soft Shovel Brush Skimmer Cassette

Cassette size	Capacity	Length mm	Width mm	Height mm	Weight
